1. The abstract of the disclosure is objected to because it is not on a separate sheet. Correction is required. See MPEP § 608.01(b).

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-11 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claims contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is not understood how the inner heat exchanger is cut out during the second mode of operation as depicted in Fig. 2. There is not enough description of the valves 9 in the specification to understand how this happens. Also, the flow of refrigerant during the first mode of operation in Fig. 1 is not understood. Are there two separate flows, one above the heat exchanger 5 and one below, as it appears to be in Fig. 1. Or is there somehow just one flow of refrigerant which is crossed through the heat exchanger 5?

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 4,702,088 to Ozu in view of U.S. Patent No. 6,662,864 to Burk et al.

Ozu discloses the claimed invention of a heat pump system where the flow of refrigerant is reversed by reversing the operation of the compressor 10. However, Ozu does not disclose the claimed inner heat exchanger. Burk et al teaches a heat pump system which also includes an inner heat exchanger 6. Thus, it would be obvious to provide Ozu with an inner heat exchanger, in view of Burk et al, to yield the predictable result that heat energy within the heat pump system is conserved by exchanging heat within the system.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
